

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

AMERICAN ANCESTRY.

THE purpose of this work is, principally, to register in a convenient and simple form the pedigree of any one person, and thus record for all time many important facts in the history of families which would otherwise be lost. Another primary object is to publish here the ancestry of a person as complete as it is known, as a means of obtaining additional information regarding it. It is also designed to be a convenient work of reference, to show the origin of the various American families. However indifferent some may affect to be regarding this question of ancestry, those who have a good pedigree will usually have a natural pride for it. Many lineages must of necessity contain nothing but simple records of uneventful generations, but they will preserve facts of great interest to descendants which would otherwise in many cases be lost in the history of a family. The plan of the work is somewhat similar in idea to the well known English works, but altered to suit the conditions of American society, and in detail is as follows :

The surname or family name is given first, with the given name, residence, birth place, and date of birth. This is followed by remarks of a brief biographical character, giving the principal events in the individual's life, such as occupation, college degrees if any, authorship, public service, experiences, and if married, date, wife's name and parentage, with remarks relating to her ancestry. If the individual whose lineage is given had brothers, the same facts may be stated respecting each of them, in order of their birth, commencing with the eldest. This completes the first generation in tracing back the lineage. Next is given the father's name, followed by same class of facts, and so continued back in male line as far as can be traced. The *name* of son, father, grandfather, etc., in direct male line are printed in black type. As the abbreviations are all of the most ordinary kind, it is unnecessary to mention them here.
